User Stories
By Evan Kiser, John Hudnall, Blake Opial, Devin Pardo

User Story 1 (Add class)

Users will sign into their school domain. Users will select the "Add Course" button. They will be taken to the course list page. Users will see a page with the course options with the times, teacher, location, and section number. The user can select the course(s) they want. The user can press the "Add Course" button to complete the schedule request.

User Story 2 (Drop class)

Users will sign into their school domain. Users will select the "Drop Course" button. They will be taken to their current course list page. Users will see a page with the course options with the times, teacher, location, and section number. The user can select the course(s) they want to drop. The user can press the "Drop Course" button to complete the schedule request.

User Story 3 (Look at calendar schedule)

Users will sign into their school domain. The user will select "View Schedule". They will be taken to their personal schedule. The schedule will be put into a weekly calendar format for viewing. The calendar view will show courses under the days on which they occur. User can press the "print" button.

User Story 4 (Use RateMyProfessor Link)

Users will be scheduling their courses. While scheduling, there will be a link to a professor's rate my professor page. The user will click on the link. The link will redirect them to that professor's page. The user will return to the scheduler when they have finished viewing the page.

User Story 5 (Filter courses)

Users can access this in the Add Class or Course List. Users can automatically filter to find their course. Users can manually type in the course name to filter. Users will be shown their filtered course list.
